

**Time
moves on;
memories
should not**

Take part in this journey with us to learn more about Alzheimer's

The TAURIEL Study will look at an investigational medication for people with mild Alzheimer's disease or people who have problems with memory. The study will help determine how safe the investigational medication is and whether or not it works in affecting Alzheimer's disease.

We are looking for approximately 360 people who may be able to join this study.

The TAURIEL Study might be right for you if you:

- are 50 to 80 years of age
- have mild Alzheimer's disease or problems with memory
- have somebody who can be a reliable study partner or caregiver and who can come to some study visits with you and answer questions about your health.

The study could last up to 3.5 years, depending on how long you choose to participate. All study-related care will be provided at no cost.

We are enrolling people now — want to know more?
